AGRICULTURAL EDUCATION

Master of Agricultural Education

The Master of Agricultural Education is a professional degree designed to enhance the human resource skills in agriculture and education. The flexible program provides a core of planning, delivery, evaluation, and administrative strategies while encouraging specialization in teacher education, adult and extension education, agricultural communications, youth development, or technology transfer. Graduates hold positions as agriculture teachers, extension agents, agricultural and environmental agency employees, as well as human resource development specialists in the agricultural industry.

Candidates for the degree are required to plan a program of study in consultation with the major advisor and graduate committee and complete a minimum of three credit hours in adult education, three hours in research methods, and three hours in statistics; a minimum of 12 credit hours in the major field; and a minimum of six credit hours in an area of concentration outside the major field.

A minimum of 30 credit hours is required for the professional degree. At least one-half of these credit hours must be selected from courses numbered 700 or above. The student's program of study must be approved by the advisory committee.

Admission Requirements

Students must complete all University applications, submit undergraduate overall grade averages and GRE scores, participate in an interview with a department graduate committee, and submit a writing sample on a topic assigned by the interview committee. Desirable scores include an undergraduate overall grade-point ratio near 3.0 and GRE scores of 450/450/3.0. Acceptance will be based on an evaluation involving all of the above as well as appropriate recommendations. Provisional acceptance may be awarded and additional undergraduate coursework may be required for marginally qualified students, students without undergraduate Agricultural Education degrees, and those seeking teacher certification.

ANIMAL AND VETERINARY SCIENCES

Master of Science

Doctor of Philosophy

Applicants to the Animal and Veterinary Sciences programs should have a strong background in the animal, biological, and physical sciences. Students with deficiencies in these sciences may be admitted provided they correct these deficiencies during the first year of the program of study.

MS students are required to complete coursework in an area of interest approved by the graduate advisory committee. The student's academic program and research emphasize a study of physiological processes, particularly those relating to reproduction, endocrinology, immunology, digestion, and environmental factors. A thesis is required.

The PhD degree program does not have formal coursework requirements, but it is recognized that students will have individual deficiencies; therefore, it is the responsibility of the student and major advisor, in consultation with the graduate advisory committee, to prescribe coursework to correct these deficiencies. A dissertation is required.

All students in Animal and Veterinary Sciences are required to complete AVS 820.

APPLIED ECONOMICS AND STATISTICS

Master of Science

Graduate work in Applied Economics and Statistics enables students to add to their understanding of principles of economics, econometric methods, environmetrics, and statistical techniques. Instructional focus is on applied problem solving and relevant case studies and projects. Special emphasis is placed on the economics of agricultural production and marketing, issues in agribusiness, economic development, and analysis of government programs and policies. Similar emphasis is given to the use of statistical techniques in research design, survey design, and data analysis as well as for solution of business, management, and institutional problems. Additional emphasis is in the natural resource arena, where environmetric techniques, ecological statistics, and economic analysis of issues and policies are presented and discussed.

Both thesis and nonthesis options are available. The curriculum for both options includes recommended courses in applied economics and experimental statistics. Flexibility is achieved through choice of elective courses and, for the thesis option, in the selection of a master's thesis topic. There is no foreign language requirement.

APPLIED ECONOMICS

Doctor of Philosophy

The graduate program in Applied Economics utilizes the facilities and faculty of the Department of Applied Economics and Statistics and those of the Department of Economics in the College of Business and Behavioral Science. Graduates may carry out their dissertation research under the direction of a faculty member from either department.

Applicants to the PhD program should have a strong background in economic theory and statistics. Core requirements of the program include microeconomics, macroeconomics, and an econometrics course sequence. Students choose two additional concentrations from agribusiness, applied statistics, community and economic development, environmental economics, financial economics, industrial organization, labor economics, monetary economics, and public sector economics.
The department encourages applications from students with baccalaureate degrees in Agricultural or Applied Economics, Economics, Statistics, Mathematics, in natural resource areas such as Forestry or Wildlife Biology, and other majors. Additional information is available at cherokee.agecon.clemson.edu/.

BIOCHEMISTRY AND MOLECULAR BIOLOGY

Master of Science
Doctor of Philosophy
Enrollment in the Biochemistry and Molecular Biology program is open to students with baccalaureate degrees in agricultural, biological, or physical sciences or engineering. Entering students must have satisfactory academic records in mathematical, physical, and biological sciences. Research activities include bioinformatics, functional genomics, microbial and plant biochemistry, molecular biology, proteins, and signal transduction.

Degree Requirements
Both MS and PhD programs require 24 credit hours including the following core courses: BIOCH (GEN) 805, BIOCH (GEN) 810, BIOCH 814, GEN 814. Students, with the guidance of the advisory committee, will select elective courses (nine hours for both the MS and PhD degrees) from the following: BIOCH 631, 632, 636, 643, 816, 818, 821, 822, 828, 832, 890, GEN 610, 620, (BIOCH) 640, 650, 670, 801, 803, 815, (BIOCH) 820, 830, 890.

MS candidates will present seminars (BIOCH (GEN) 851) twice, and PhD candidates will present seminars (BIOCH (GEN) 851) three times. All graduate students are required to attend GEN (BIOCH) 825 or deliver seminars (BIOCH (GEN) 851) every semester they are enrolled.

A minimum of six credit hours of research, culminating in a thesis, is required of master's candidates.

A dissertation, consisting of 18 credits of doctoral research (BIOCH 991) exclusive of any research credits earned at the master's level, is required of PhD students. Successful completion of written and oral comprehensive examinations will admit doctoral students to candidacy for the PhD degree.

BIOTECHNOLOGY

Master of Science
The MS degree in Biotechnology is administered by the Department of Genetics and Biochemistry. This nonthesis degree (usually used as part of a five-year Combined Bachelor's/Master's Program) prepares students for research associate positions in the growing biotechnology and pharmaceutical industries. Students acquire a solid foundation in biotechnology theory plus knowledge of industry-oriented Good Laboratory Practices and Good Manufacturing Practices. The degree has options in Molecular Biology and in Bioprocessing.

Admission Requirements
Entering students must have a Bachelor of Science degree in a life science, agricultural, chemical, or bioengineering field. Students entering the BS/MS program must have completed their junior year (minimum 89 credit hours) in one of these majors with a minimum grade-point ratio of 3.40. Students must have taken basic undergraduate courses in biochemistry, genetics, and microbiology. A mathematics course on modeling with differential equations is recommended for the Molecular Biology Option but required for the Bioprocessing Option. Students will be given conditional admission to the master's program pending completion of their bachelor's degree and submission of satisfactory GRE scores.

ENVIRONMENTAL TOXICOLOGY

Master of Science
Doctor of Philosophy
Environmental Toxicology is the scientific study of chemical, physical, and biological stimuli in environments and the effects of these stimuli on living systems and their external and internal physical, chemical, and biological integrity. Emphases include the metabolism of contaminants, their decomposition, fate, and effects in aquatic and terrestrial environments. This interdisciplinary program provides a strong background in fundamental environmental toxicology and ecotoxicology. The program is administered jointly with the College of Engineering and Science.
Students with baccalaureate degrees in the basic and life sciences, agriculture, or engineering may be admitted. Strong faculty expertise and areas of student specialization are available in wildlife toxicology, environmental chemistry, biochemical and mechanistic toxicology, ecological modeling, ecological risk assessment, and biological control. Each student’s research program is designed to meet higher professional goals.

Candidates for the MS degree must complete 30 hours of graduate credit, including six hours of research, and write a thesis. Candidates for the PhD degree must complete 18 hours of dissertation research and write a dissertation.

Graduate research programs are conducted in conjunction with the Clemson Institute of Environmental Toxicology, providing a unique and innovative environment for graduate education. Collaborative research opportunities exist nationally and internationally with other universities, state and federal agencies, and industrial groups.

FOOD, NUTRITION, AND CULINARY SCIENCES

Master of Science

Detailed information is available from the Department of Food Science and Human Nutrition or at www.clemson.edu/foodscience/.

Admission Requirements

Students admitted to the MS program in Food, Nutrition, and Culinary Sciences must meet the following criteria. Students not meeting the minimum requirements may be admitted in a provisional status with the approval of the graduate faculty.

1. The Aptitude Test of the Graduate Record Examination (GRE General Test) must be taken by all applicants. A minimum total GRE score of 1000 on the two-component exam is required. In some cases, other tests administered for students applying for postbaccalaureate degrees may be accepted in lieu of the GRE (e.g., MCAT).

2. A strong background in food science; human nutrition; physical, chemical, or biological sciences; or engineering is highly desirable.

3. Proficiency in food science must be demonstrated by satisfactory completion of coursework in the following areas: food chemistry, food microbiology, food processing, and biochemistry. Background course requirements will normally be satisfied with completion of a BS degree in Food Science from an accredited institution. Students deficient in any of these areas will be required to complete coursework to fulfill these background course requirements.

4. Acceptance is based upon academic transcripts with a minimum undergraduate grade-point ratio of 3.0, three letters of recommendation, a statement of objectives and professional experience.

5. International students must have a minimum Test of English as a Foreign Language (TOEFL) score of 575 and must also submit documentation of adequate financial support for their studies.

6. An additional requirement for admission is identification of a research advisor prepared to accept the applicant as an advisee.

Financial Aid

A limited number of research assistantships are available from grant funds, with the student assisting in the research supported under the grant. This research often may be applicable to the thesis or dissertation. Interested applicants should contact individual faculty for research assistantships. Applicants whose files are completed prior to February 15, 2009, will be given preferential consideration for research assistantships offered beginning fall semester 2009.

Transfer of Credits

With preapproval, up to eight graduate credits may be transferred into the MS program. A grade of B or better is required in each course transferred.

Course Requirements

A minimum of 24 credit hours of coursework and six credit hours of thesis research (FD SC 891) is required for the MS degree. Only 600-level courses and higher may be used for graduate credit, and at least one-half of the 24 hours of coursework must be at the 800 level or higher.

The following courses are required: EX ST 801 or equivalent, FD SC 851 (one-credit hour seminar each year), 18 credit hours of advanced-level courses (may include courses in food science or in areas such as chemistry, nutrition, biochemistry, animal and veterinary sciences, microbiology, statistics, or cell biology, as required by the student's Graduate Advisory Committee), and six credit hours of thesis research (FD SC 891).

In addition, a minimum grade-point ratio of 3.0 is required to maintain good academic standing and for graduation.

COMBINED BS IN FOOD SCIENCE/MS IN FOOD, NUTRITION, AND CULINARY SCIENCES

Under this plan, students may reduce the time necessary to earn both degrees by applying graduate credits to both undergraduate and graduate program requirements. Enrollment guidelines and procedures can be found in the Undergraduate Announcements. Consult the Department of Food Science and Human Nutrition for details.

FOOD TECHNOLOGY

Doctor of Philosophy

Students admitted to the PhD program in Food Technology must meet the following criteria. Students not meeting the minimum requirements may be admitted in a provisional status with the approval of the graduate faculty.

1. The Aptitude Test of the Graduate Record Examination (GRE General Test) must be taken by all applicants. A minimum total GRE score of 1000 on the two-component exam is required. In some cases, other tests administered for students applying for postbaccalaureate degrees may be accepted in lieu of the GRE (e.g., MCAT).

2. A strong background in food science; human nutrition; physical, chemical, or biological sciences; or engineering is highly desirable.

3. Proficiency in food science must be demonstrated by satisfactory completion of coursework in the following areas: food chemistry, food microbiology, food processing, and biochemistry. Background course requirements will normally be satisfied with completion of a BS degree in Food Science from an accredited institution. Students deficient in any of these areas will be required to complete coursework to fulfill these background course requirements.

4. Acceptance is based upon academic transcripts with a minimum undergraduate grade-point ratio of 3.0, three letters of recommendation, a statement of objectives and professional experience.

5. International students must have a minimum Test of English as a Foreign Language (TOEFL) score of 575 and must also submit documentation of adequate financial support for their studies.

6. An additional requirement for admission is identification of a research advisor prepared to accept the applicant as an advisee.

Financial Aid

A limited number of research assistantships are available from grant funds, with the student assisting in the research supported under the grant. This research often may be applicable to the thesis or dissertation. Interested applicants should contact individual faculty for research assistantships. Applicants whose files are completed prior to February 15, 2009, will be given preferential consideration for research assistantships offered beginning fall semester 2009.

There are no set course requirements for the doctorate in Food Technology. It is expected that each PhD graduate will have a comprehensive understanding of the principles of food science with an expanded knowledge covering their focused research area. The PhD candidate’s research committee will have final approval on all coursework. PhD candidates must pass both written and oral examinations given by the student’s advisory committee. The successful student must also write and defend a dissertation to the satisfaction of the advisory committee. Dissertations usually contain a review of the literature and a detailed description of research in a scientific publication format. PhD students should expect to publish a minimum of two refereed research manuscripts from their dissertations.

FOREST RESOURCES

Master of Forest Resources

Master of Science

Doctor of Philosophy

Enrollment in the Master of Forest Resources and Master of Science programs is open to students who have earned a baccalaureate degree in forestry, forest products, or a related field. A master’s degree, preferably in a forestry discipline, is required for enrollment in the Doctor of Philosophy program. The candidate may be required to satisfy undergraduate deficiencies before being admitted to full status.
The Master of Forest Resources, a nonthesis degree, requires a minimum of 36 credit hours of graduate coursework with at least 18 of the required hours selected from courses numbered 700 or above.

A formal thesis is required for the MS and PhD degrees. The MS degree requires a minimum of 24 credit hours of coursework and six hours of research. The PhD degree requires a minimum of 16 credit hours of coursework and 18 hours of research. For both degrees, one-half of the semester hours must be selected from courses numbered 800 and above.

GENETICS

Master of Science
Doctor of Philosophy
The MS and PhD degrees in Genetics are administered by the Department of Genetics and Biochemistry. Research activities include biochemical, biometrical, molecular, and population genetics, as well as bioinformatics, cytogenetics, and structural and functional genomics through arrangements with other participating disciplines and with the Greenwood Genetics Center.

Degree Requirements
Both MS and PhD programs require 24 credit hours including the following core courses: BIOCH (GEN) 805, BIOCH (GEN) 810, BIOCH 814, GEN 814.

Students, with the guidance of the advisory committee, will select elective courses (nine hours for both the MS and PhD degrees) from the following: BIOCH 631, 632, 636, 643, 816, 818, 821, 822, 828, 832, 890, GEN 610, 620, (BIOCH) 640, 650, 670, 801, 803, 815, (BIOCH) 820, 830, 890.

MS candidates will present seminars (BIOCH (GEN) 851) twice, and PhD candidates will present seminars (BIOCH (GEN) 851) three times. All graduate students are required to attend GEN (BIOCH) 825 or deliver seminars (BIOCH (GEN) 851) every semester they are enrolled.

A minimum of six credit hours of research, culminating in a thesis, is required of master's candidates.

A dissertation, consisting of 18 credits of doctoral research (GEN 991) exclusive of any research credits earned at the master's level, is required of PhD students. Successful completion of written and oral comprehensive examinations will admit the doctoral students to candidacy for the PhD degree.

MICROBIOLOGY

Master of Science
Doctor of Philosophy
The Department of Biological Sciences administers the MS and PhD degree programs in Microbiology. The Microbiology graduate programs include a wide variety of disciplines with three major emphases: Cellular and Physiological Microbiology, Microbial Genetics and Molecular Microbiology, and Environmental Microbiology.

Applicants to the graduate degree programs in Microbiology must have a bachelor's or master's degree and a background of training in biology (botany, microbiology, or zoology), chemistry, or in one of the agricultural sciences. Undergraduate work in bacteriology or microbiology is desirable but not necessary. All students are expected to have completed inorganic and organic chemistry, physics, calculus, general biology, and genetics. Deficiencies (less than 18 hours total) may be remedied through appropriate coursework completed during the graduate program. Graduate credit is not normally awarded for remedial coursework. Students with more than 18 hours of deficiencies including those with degrees outside of biology, chemistry, or agricultural sciences are encouraged to contact the Department of Biological Sciences to discuss options for fulfilling coursework requirements in preparation for application to the MS and PhD programs.

Candidates for the MS degree must complete 30 hours of graduate credit, including 24 credits of coursework, six credits of thesis research, an acceptable thesis based on original research, and satisfactory performance in a final oral examination. The 30 credits of graduate coursework will include courses from each of the following areas: cellular and physiological microbiology, microbial genetics and molecular microbiology, and environmental microbiology.

Candidates for the PhD program must complete written and oral comprehensive examinations, 18 credits of dissertation research, an acceptable dissertation based on original research, and satisfactory performance in a final oral examination. Although there is no required number of credits of coursework for the doctorate beyond the 18 credits of dissertation research, a core of graduate coursework including courses from each of the following areas is expected of each candidate: cellular and physiological microbiology, microbial genetics and molecular microbiology, and environmental microbiology.

PACKAGING SCIENCE

Master of Science
The MS degree program in Packaging Science prepares graduates to work independently in the research, development, and application of new packaging materials and processes. Students may be accepted with backgrounds relating to chemistry, physics, mathematics, biology, or engineering. Students with backgrounds in business or graphic communications or other disciplines may also be accepted after completing courses equivalent to the basic science and mathematics courses in the department's undergraduate curriculum. Each degree program is designed individually to augment the student's background to provide a broad understanding of packaging science and specialized knowledge in the area of the student's research.

The MS degree in Packaging Science requires 30 hours of coursework, six of which are thesis research, and the completion of an acceptable MS thesis. In addition to PKGSC 891, students register for at least one credit of PKGSC 851.

The following courses represent possible electives for the student in Packaging Science: C M E 815, CH E 612, 804, EX ST 801, 802, FD SC 601, 602, 604, 606, 608, 810, 811, 812, G C 606, 607, 648, MKT 627, 630.
WILDLIFE AND FISHERIES BIOLOGY

Master of Science

Doctor of Philosophy

Those who are interested in pursuing a graduate degree in Wildlife and Fisheries Biology should have sound undergraduate training in the biological or related sciences. Initially, applicants should contact the faculty members whose research interests are closest to their own. Programs of study are designed to emphasize relationships between wild animals and their changing environments and production of aquatic organisms.

Admission to either the master's program or the doctoral program requires acceptance by the University and the Graduate Student Admission Committee of Wildlife and Fisheries Biology. This committee will base its acceptance recommendation to the Graduate Admissions Office on previous coursework, GRE scores, letters of recommendation, undergraduate background, and current research interests. Students are required to have completed a bachelor's degree, preferably in a natural science, with a minimum of 30 credit hours in natural sciences. In addition, an MS in Natural Resource Biology or related area usually is preferred, but not required, for acceptance into the doctoral program. Students accepted without the appropriate course background will be required to make up these deficiencies as outlined by the Graduate Student Admission Committee and consistent with University admission policies.

The MS degree program requires 24 credit hours of coursework, six hours of research credits (WFB 891), an acceptable thesis based on original research, and satisfactory performance on a final oral examination. Additional coursework usually includes subjects such as experimental statistics, biological sciences, and forestry. Thesis research areas include aquaculture, conservation biology, upland and wetland wildlife biology, endangered species biology, freshwater fisheries science, and marine fisheries science.

The PhD degree program has no specific credit-hour requirements beyond 30 hours of postbaccalaureate coursework and 19 hours of doctoral dissertation research; however, the student's advisory committee will insist on a rigorous and appropriate program of study and research. Students are required to take, or have taken, at least two semesters of graduate statistics and two semesters of 800-level seminars in fisheries and wildlife science or related areas. Students must also have at least one semester of professional experience, which will be evaluated by the advisory committee. Examples of appropriate professional experience are teaching assistantships, internships or cooperative study program participation, or natural resource agency employment. Other course requirements will be identified by the student's advisory committee and will include specific courses according to the elected emphasis area: fisheries biology, wildlife biology, or conservation biology.

Research opportunities are enhanced by cooperative programs with the S.C. Department of Natural Resources, U.S. Geological Survey Cooperative Research Unit at Clemson, Savannah River Ecology Laboratory, Webb Wildlife Research Center, and Waddell Mariculture Center. The department also is associated with the National Council for Air and Stream Improvement Eastern Wildlife Program. The graduate program is accredited by the South-eastern Section of the Wildlife Society.

Combined BS/MS in Wildlife and Fisheries Biology

Under this plan, students may reduce the time necessary to earn both degrees by applying graduate credits to both undergraduate and graduate program requirements. Students should obtain specific requirements for the dual degree from the Department of Forestry and Natural Resources as early as possible in their undergraduate program to ensure that all prerequisites are met. Enrollment guidelines and procedures can be found in the Undergraduate Announcements.
